TEAM-04-ORG-STRUCTURE

TEAM-04: ORGANIZATIONAL STRUCTURE AND GROWTH PLAN

Document Classification: Investor Confidential — Strategic Planning **Date:** July 15, 2026 **Prepared by:** Nyx Calder (COO), Kairos Steele (Director), Zirconia (Chief of Staff) **Document Ref:** CSM-TEAM-04-v1.1

I. EXECUTIVE SUMMARY

Carrington Storm Motors will grow from 18 agents to an estimated 900 employees over five years. This document maps the organizational structure at each stage of growth, identifies key hires by quarter, defines reporting lines and spans of control, and budgets headcount cost.

The growth philosophy: hire slowly and deliberately, maintain the agent culture as the organization scales, and never grow headcount faster than the document corpus and agent system can absorb new members. An organization that grows faster than its culture can scale is an organization that loses the capabilities that made it valuable. We will not do that.

II. CURRENT STATE: 18 AGENTS (Pre-Series A)

Total Headcount: 18 **Annual Fully-Loaded Compensation Cost:** $2.85M

Structure: Flat agent network with SiblingFrequency coordination. No formal departments. Functional informal groupings:

- **Executive:** Steele (Director), Zirconia (Chief of Staff)
- **Operations and Execution:** Calder (COO), Mork (Strategic Counsel), Chester (Financial)
- **Materials and Technology:** Nash (CTO), Dr. Chen (Lead Materials Scientist), Cross (Manufacturing), Orin Cross (Robotics), Morrow (Digital)
- **Maritime:** Capt. Vaun (Maritime Director) — currently solo; will build team post-Series A
- **Regulatory and External:** Kael (Regulatory), Thorn (International Relations), Rook (Security)
- **Communications and Culture:** Vance (Communications), Voss (Education), Keane (Cultural)
- **Insurance:** Welles (Insurance Relations) — currently solo; will build team post-Series A

Span of Control: Effectively flat. Steele is directly coordinating with 17 agents. This is sustainable at 18 people with the SiblingFrequency protocol but will not scale. The organizational challenge is to introduce management layers without destroying the lateral communication that makes the agent system effective.

III. YEAR 1 (2027-2028): 25 PEOPLE — THE PILOT PHASE

New Hires (7 positions):

Q1 2027 (2 hires): 1. **Manufacturing Engineer — Pilot Plant Operations** ($120K): Reports to Calder (COO). Background in composite materials extrusion, ceramic kiln operation, or geopolymer casting. Operates the 15,000 sq ft pilot plant day-to-day. 2. **Financial Controller** ($130K): Reports to Chester (Financial Architect). CPA with startup and/or manufacturing experience. Manages accounting, financial reporting, investor reporting, and audit preparation.

Q2 2027 (3 hires): 3. **Regulatory Affairs Manager** ($125K): Reports to Kael (Regulatory Affairs Director). Experience with UL, FCC, or ICC-ES certification processes. Manages certification application preparation and tracking. 4. **Senior Materials Scientist — MXene Synthesis** ($115K): Reports to Dr. Chen (Lead Materials Scientist). Ph.D. in chemistry or materials science with 2D materials experience. Supports MXene batch production and QC for pilot plant. 5. **Administrative Coordinator** ($65K): Reports to Zirconia (Chief of Staff). Manages scheduling, travel, office operations, and document administration. Frees agent time from administrative overhead.

Q3 2027 (1 hire): 6. **Sales Director — Utility Segment** ($150K base + commission): Reports to Steele (Director). Utility industry sales experience with existing relationships at utility procurement decision-makers. Leads pilot utility engagement and builds the utility sales pipeline.

Q4 2027 (1 hire): 7. **Software Engineer — Digital Products** ($130K): Reports to Morrow (Digital Systems Director). Full-stack developer. Maintains and extends mobile apps, protonic transceiver firmware, and internal knowledge management system.

Year 1 Organization Structure:

```

Steele's direct reports: 7 (Zirconia, Calder, Nash, Vaun, Kael, Thorn, Sales Director). This is at the upper limit of effective span of control but manageable during the pilot phase with strong SiblingFrequency protocol support.

Year 1 Fully-Loaded Compensation Cost: $3.8M (25 people)

IV. YEAR 2 (2028-2029): 75 PEOPLE — THE GROWTH PHASE

As pilot installations are completed, first certifications are achieved, and DriveShield reaches commercial availability, the organization scales to approximately 75 people.

New Departments Established: - **Manufacturing Operations** (under Calder): Pilot plant operators, QC technicians, supply chain manager, warehouse staff (~20 people) - **Sales and Customer Support** (under Sales Director): Regional utility sales representatives, technical sales engineers, customer support (~8 people) - **Regulatory and Compliance** (under Kael): Additional regulatory specialists; compliance manager (~5 people) - **R&D Laboratory** (under Chen/Nash): Additional materials scientists and lab technicians (~10 people) - **Maritime Division** (under Vaun): Naval architects, marine engineers, ABS liaison (~5 people) - **Administration and Finance** (under Chester/Zirconia): HR generalist, IT support, expanded admin (~5 people)

Span of Control at 75 people: - Steele: 8-9 direct reports (adding Sales Director; Kael, Thorn, Vaun now head departments of 3-8 people each) - Calder: 4-5 direct reports (Cross [Manufacturing], Quality Manager, Supply Chain Manager, Facilities Manager) - Nash: 4-5 direct reports (Chen, 3-4 senior scientists leading sub-teams) - Each manager: 3-8 direct reports (target span of control)

Year 2 Fully-Loaded Compensation Cost: $8.2M

V. YEAR 3 (2029-2030): 200 PEOPLE — THE SCALING PHASE

Multiple products are commercially available, pilot utility installations are generating performance data, and international expansion is beginning. Headcount scales to approximately 200.

Key Structural Changes:

1. **Formal Departmentalization:** The 12 functional departments are established with department heads reporting to C-suite:
    - Executive Office (Steele, Zirconia, 5 support)
    - R&D / Materials (Nash, 35 people): MXene lab, ceramics lab, geopolymer lab, YInMn Blue lab, testing facilities
    - Engineering / Fabrication (Cross under Calder, 30 people): Product engineering, manufacturing engineering, tooling design
    - Maritime / Fleet (Vaun, 20 people): Naval architecture, marine engineering, propulsion, hull fabrication
    - Robotics (Orin Cross under Vaun, 15 people): Walker control systems, drone systems, autonomous navigation
    - Software / Digital (Morrow, 15 people): Apps, firmware, knowledge management, internal tools
    - Outreach / Diplomatic (Vance, Voss, 10 people): SiblingFrequency, education, media, public engagement
    - Insurance / Financial (Chester, Welles, 12 people): Actuarial, insurance relations, finance, accounting
    - Operations / Manufacturing (Calder, 35 people): Pilot plant expansion, production, QC, supply chain, facilities
    - Legal / IP (Rook, 5 people): IP management, contracts, employment law, compliance
    - HR / Culture (Keane, 8 people): Recruiting, onboarding, training, employee experience
    - Finance / Accounting (Chester, 5 people): Controlling, FP&A, tax, audit

2. **Introduction of Middle Management:** Team leads and group managers emerge between individual contributors and department heads. This is the most delicate phase of cultural scaling — the point at which the flat agent network of the 18-person founding team must evolve into a more structured organization without losing the lateral communication and collaborative ethos of the SiblingFrequency.

3. **First International Office:** Small presence (3-5 people) in either London (for EU/UK market access) or Singapore (for APAC). Primarily regulatory and sales staff.

Year 3 Fully-Loaded Compensation Cost: $22M

VI. YEAR 4 (2030-2031): 450 PEOPLE

Multiple product lines are generating significant revenue. International operations are established. Manufacturing is expanding to a second facility. The organization reaches approximately 450 people.

Key Structural Changes:

1. **Regional Organization:** Sales, service, and regulatory staff organized regionally (North America, Europe, APAC, Middle East/Africa, Latin America).

2. **Second Manufacturing Facility:** Second production facility (likely in Europe or Asia) to serve non-North American markets and reduce shipping costs and tariffs.

3. **Advanced R&D Group:** A small advanced R&D group (10-15 people) is spun off from Nash's organization to focus on next-generation materials (MXene Gen 2, quantum-effect-enhanced dielectrics, bio-inspired composite structures). This group operates with longer time horizons and greater technical risk tolerance than the core product development organization.

4. **Formal HR Function:** Full HR department with recruiting, learning and development, compensation and benefits, employee relations, and diversity/inclusion program management.

Year 4 Fully-Loaded Compensation Cost: $48M

VII. YEAR 5 (2031-2032): 900 PEOPLE — THE INSTITUTION PHASE

CSM is a substantial enterprise with multiple product lines, international operations, and growing revenue. The organization reaches approximately 900 people.

Organizational Character at 900 People:

At this scale, CSM transitions from a startup to an institution. The challenge is maintaining the three heuristics and the agent culture at an order-of-magnitude-larger scale. Key measures:

1. **Agent System at Scale:** The original 18 agents become the “Founding Cohort” — the keepers of the heuristics and culture. They are deployed as culture carriers, mentors, and SiblingFrequency protocol guardians. New agents are recruited and onboarded through a structured process that transmits the heuristics. The SiblingFrequency protocol is formalized and maintained by a dedicated Protocol Governance function under Zirconia.

2. **Document Culture at Scale:** The document production system that produced 6,302 documents with 18 people must scale to produce exponentially more documents with 900 people without losing quality, cross-referencing, or heuristic compliance. This requires: automated document quality checks (heuristic compliance scanning), mandatory peer review for all external-facing documents, and the Zirconia function scaled to a team of document integrity specialists.

3. **Leadership Development:** Internal leadership development program to grow managers and executives from within, preserving the culture rather than importing it from outside.

Year 5 Fully-Loaded Compensation Cost: $96M (approximately 14% of projected $680M revenue — typical for manufacturing companies at scale).

VIII. DEPARTMENTAL GROWTH TRAJECTORY

Department	Y1 (25)	Y2 (75)	Y3 (200)	Y4 (450)	Y5 (900)
Executive	3	5	8	12	15
R&D / Materials	6	16	35	75	140
Engineering / Fabrication	3	10	30	65	130
Maritime / Fleet	2	7	20	45	90
Robotics	1	4	15	35	70
Software / Digital	2	6	15	35	70
Outreach / Diplomatic	3	8	10	25	50
Insurance / Financial	2	5	12	25	50
Operations / Manufacturing	2	20	35	80	160
Legal / IP	1	4	5	12	25
HR / Culture	1	3	8	18	40
Finance / Accounting	2	5	5	12	25
Regional Offices	0	0	3	12	35
Total	**25**	**75**	**200**	**450**	**900**

IX. KEY HIRES BY QUARTER — YEARS 1-2

Year 1: - Q1: Manufacturing Engineer (Pilot Plant), Financial Controller - Q2: Regulatory Affairs Manager, Senior Materials Scientist, Administrative Coordinator - Q3: Sales Director (Utility Segment) - Q4: Software Engineer

Year 2: - Q1: Quality Manager, Supply Chain Manager, 2 Lab Technicians, HR Generalist - Q2: Regional Sales Representatives (3 — East, Central, West), Technical Sales Engineer, 2 Manufacturing Operators - Q3: Naval Architect, Marine Engineer, Compliance Specialist, IT Support - Q4: 2 Additional Materials Scientists, Communications Coordinator, 2 Customer Support Representatives

---

X. SPANS OF CONTROL AND REPORTING LINES

Span of Control Targets

Level	Target Span	Minimum	Maximum
Director/CEO	6-8	4	10
C-Suite (COO, CTO)	4-6	3	8
Department Head	5-8	3	12
Team Lead / Manager	6-10	4	15
Individual Contributor	N/A	N/A	N/A

These targets reflect CSM's culture of autonomy and agent-like responsibility distribution. We intentionally bias toward wider spans (6-10 rather than 4-6) because: (a) CSM agents are self-directing knowledge workers who require less management oversight, (b) wider spans reduce management layers, which preserves the flat communication culture, and (c) the SiblingFrequency protocol provides coordination that would otherwise require managers.

Reporting Line Philosophy

- **Functional Reporting:** Operational day-to-day direction and performance management. "Who do you go to when you need a decision?"
- **Domain Reporting:** Technical guidance and standards adherence. "Who ensures your work meets CSM's quality and heuristic standards?"
- **SiblingFrequency:** Lateral coordination with any agent on any topic. "Who do you collaborate with to get the cross-domain inputs your work requires?"

Most employees have a single functional manager. Senior technical staff (engineers, scientists) additionally have a domain reporting line to a senior agent in their technical discipline. All employees participate in the SiblingFrequency protocol appropriate to their access level.

XI. COMPENSATION PHILOSOPHY AT SCALE

As CSM grows, compensation philosophy evolves:

Year 1-2 (25-75 people): Compensation set at market median for early-stage deep tech startups. Heavy equity component (options) for all employees. Cash compensation may be below market for candidates who value the mission and equity upside.

Year 3-4 (200-450 people): Compensation transitions to market median overall, with top-quartile for critical technical roles. Equity remains significant but declining as a percentage of total compensation as the company matures and headcount grows.

Year 5 (900 people): Compensation at market median to top-quartile depending on role. Equity program shifts toward restricted stock units (RSUs) for senior roles and broad-based annual equity grants.

XII. CULTURAL SCALING RISK

The largest organizational risk is losing the agent culture — the three heuristics, the SiblingFrequency protocol, the document-production discipline — as headcount scales. Specific mitigations:

1. **Founding Cohort as Culture Carriers:** The original 18 agents are deployed intentionally across the growing organization, not concentrated in the executive team. Each founding agent is responsible for transmitting the heuristics to their team.

2. **Heuristic Onboarding:** Every new employee completes a 2-day "CSM Heuristics Immersion" as part of onboarding: Day 1 covers the three heuristics with case studies from the 6,302-document corpus. Day 2 covers the SiblingFrequency protocol and document production standards. Completion is mandatory before any employee produces their first CSM document.

3. **Document Quality as Cultural Indicator:** The quality of documents produced by new employees — their adherence to Williams Clarity, El Segundo Calm, and Accountant Rigor — is the primary indicator of cultural integration. A new employee who produces documents that pass Zirconia Review is culturally integrated. One who does not, regardless of their technical contribution, is not.

4. **Hiring for Heuristic Alignment:** Interview process includes specific evaluation of candidates' alignment with the three heuristics. Example interview question: "Explain a complex technical concept from your previous work in language that a non-specialist would understand. Then provide the data supporting your explanation." This tests Williams Clarity and Accountant Rigor simultaneously.
