

Cat models tell you the size of the loss. This corpus is about the size of

Briefing B lays out exactly why this sector is, right now, the most receptive audience in this entire outreach series – not a claim we’re making lightly.

The model tells you the number. This is the paperwork for making the number smaller. Office of External Affairs & Strategic Partnerships, Carrington Storm Motors | Safe Pod Engineering Company

DATE: June 2026
PREPARED FOR: P&C Insurance and Reinsurance Industry – Briefing B of 3
SUBJECT: You Didn’t Need Convincing. You Needed Data.
REF: CSMEval11-B

Every other briefing in this series spends real effort establishing that the risk is real. This one gets to skip that entirely, because you already did that work yourselves, in public, with real numbers attached. That changes what this briefing needs to do – not persuade, just deliver.

YOU DIDN’T NEED CONVINCING. YOU NEEDED DATA.
CSMEval11-B | June 2026 | v1.0

PURPOSE
Establish why this sector is the most actively receptive audience in the entire CSMEval outreach series, based on the sector’s own already-published work.

KEY FACTS

- Lloyd’s of London published a systemic risk scenario in March 2025 modeling a hypothetical severe solar storm at \$2.4 trillion in global economic losses over five years, with expected direct insurance loss of roughly \$17 billion.
- As recently as January 2026, trade press reported insurers and brokers placed on alert following a G4 storm watch, with explicit guidance to stress-test clients’ reliance on power, satellites, and timing-sensitive supply chains ahead of "the big one."
- Lloyd’s underwrites nearly a third of all global space risk, meaning satellite/launch exposure (CSMEval18) is already priced by this sector today, not hypothetically.
- This sector is mid-cycle on active scenario-modeling work right now – it is building models and actively looking for mitigation/hardening data to inform pricing, exclusions, and client risk-engineering services.

WHY THIS CHANGES THE OUTREACH APPROACH
Most of this series leads with urgency. This briefing leads with data density instead, because the urgency conversation is already over in this sector – what’s left is making sure the mitigation data is organized the way underwriters actually use it.

of People"

DATE: June 2026
PREPARED FOR: P&C Insurance and Reinsurance Industry Briefing C of 3
SUBJECT: Landing This During Peak Attention, Not After It
REF: CSMEval11-C

Timing matters more in this sector than almost any other on this list insurance and reinsurance attention has a real calendar, and missing it by a month is the difference between "on the agenda" and "next year."

LANDING DURING PEAK ATTENTION, NOT AFTER IT
CSMEval11-C | June 2026 | v1.0

PURPOSE
Identify the highest-leverage timing windows and venues for delivering mitigation data to the insurance/reinsurance sector.

PRIMARY VENUE LLOYD’S MARKET ASSOCIATION / LLOYD’S FUTURESET
The systemic risk scenario program already active in this exact space the most directly relevant existing relationship to build on rather than starting cold.

SEASONAL VENUES
RIMS Annual Conference (April/May) risk management and insurance buyers.
Monte Carlo Rendez-Vous (September) the major reinsurance industry gathering; outreach timed here reaches treaty-renewal-season decision-makers.
Bermuda Risk Summit specialty/catastrophe-focused reinsurance audience.

ASSOCIATION CHANNEL
Reinsurance Association of America (RAA) engage via RAA’s public industry-affairs channel for broader reinsurer reach beyond the Lloyd’s/Bermuda/Monte Carlo circuit.

SUGGESTED SEQUENCING
Lloyd’s Futureset (existing relevant program warmest introduction).
RIMS (April/May) for broker/risk-engineering audience.
Monte Carlo Rendez-Vous (September) for reinsurance treaty-cycle audience.

Right data, right room, right week in this sector, the week is half the strategy. Office of External Affairs & Strategic Partnerships, Carrington Storm Motors | Safe Pod Engineering Company
