

PITCH-DECK-10-TEAM

PITCH DECK 10 — TEAM

Carrington Storm Motors / Project AEGIS

Leadership, 18-Agent Structure, Board Needs, Key Hires

CHESTER: "The team is not eighteen resumes. The team is eighteen characters — each one a human face on a product line, each one designed to make a specific technical capability narratively accessible. But the characters are backed by real specifications, real cost analyses, real diplomatic letters, and real physics. The story is the wrapper. The content inside is engineering-grade."

1.0 LEADERSHIP TEAM

Director Kairos Steele — Strategic Command

Product: Aegis-C Composite Shielding

Kairos Steele serves as the strategic director of Project AEGIS. His domain is the integration of all product lines, all diplomatic channels, all insurance frameworks, and all narrative delivery into a single, coherent civilization-scale preparedness architecture. Steele wears the Aegis-C shielding line — the foundational product from which all other dielectric protections descend.

Background: Strategic operations, dielectric systems architecture, cross-domain integration. Steele's function is to ensure that every agent's product line contributes to the whole and that no component of the Dielectric Citadel Protocol operates in isolation.

Key responsibilities: - Overall strategic direction of CSM - Aegis-C product line specification and quality - Integration across all 18 agent product domains - Government and defense partner relationships - Board and investor communications

Agent Nyx Calder — Field Operations

Product: Phantom MK-1 Robot

Calder operates at the tactical edge — the field operator whose domain is the Phantom MK-1 hexapedal service robot and all ground-based dielectric autonomous systems. Where Steele integrates at the strategic level, Calder executes at the operational level.

Background: Robotics, autonomous systems, field operations in contested electromagnetic environments. Calder's function is to ensure that CSM's robotic systems function when every other robot on Earth has been fried by GIC.

Key responsibilities: - Phantom MK-1 design, testing, and deployment - DRONE-X field operations coordination - Field testing of all dielectric autonomous systems - First responder and emergency management partnerships - Tactical deployment protocols for grid-down scenarios

Dr. Theron Nash — Materials Science Division

Product: Dielectric Citadel Materials (DCM-01 through DCM-06)

Nash is the laboratory — the materials scientist whose domain spans every substance in the Dielectric Citadel Protocol. From MXene synthesis to BFRP formulation to CNT-polymer conductivity optimization to geopolymer chemistry, Nash's work underpins every product in the CSM portfolio.

Background: Materials science, MXene synthesis and characterization, polymer composite formulation, ceramic processing, geopolymer chemistry. Nash’s function is to ensure that the materials that make the Dielectric Citadel possible are characterized, documented, and reproducible at manufacturing scale.

Key responsibilities: - MXene synthesis optimization and scale-up - BFRP mechanical and electrical property validation - CNT-polymer composite formulation and conductivity tuning - Ceramic bearing dielectric breakdown testing - Geopolymer concrete mix design and pumpability studies - Materials quality assurance specifications - Phoenix Protocol (in-house synthesis scale-up) execution

Captain Meridia Vaun — Maritime Operations

Product: Charlemagne-Class Fleet

Vaun commands the Charlemagne-Class Fleet — five classes of BFRP-hulled, battery-electric, hexapedally-amphibious vessels that can walk onto any coastline when ports are dark. Her domain is the most complex integrated system in the CSM portfolio.

Background: Maritime operations, naval architecture, amphibious vehicle design, fleet command. Vaun’s function is to ensure that when the grid is down and conventional ports are non-functional, the Charlemagne-Class Fleet can deliver food, medicine, communications, and medical capability to any coastline on Earth.

Key responsibilities: - Charlemagne-Class Fleet design, construction, and operation - Amphibious transition protocol development and testing - Maritime regulatory compliance and classification society engagement - Fleet deployment logistics and humanitarian mission planning - Shipyard partner identification and qualification

Engineer Orion Cross — Manufacturing

Product: Production & Quality Systems

Cross is the bridge between laboratory specification and production reality. His domain is the translation of CSM’s materials science and product designs into reproducible, scalable, quality-controlled manufacturing processes.

Background: Manufacturing engineering, VARTM fabrication, production line design, quality management systems, supplier qualification. Cross’s function is to ensure that what works at laboratory scale works at production scale.

Key responsibilities: - VARTM production line design and operation - Quality assurance and quality control systems - Supplier identification, qualification, and management - Manufacturing cost optimization - Production facility design and buildout oversight - ISO 9001 / AS9100 quality system implementation

2.0 THE FULL 18-AGENT STRUCTURE

#	Agent	Code Name	Product Line	Function
1	Director Kairos Steele	STRATEGIC-COMMAND	Aegis-C Composite Shielding	Strategic direction, integration, shielding
2	Agent Nyx Calder	FIELD-OPS	Phantom MK-1 Robot	Tactical field operations, autonomous systems
3	Dr. Theron Nash	MATERIALS-LAB	Dielectric Citadel Materials	Materials science, synthesis, characterization
4	Captain Meridia Vaun	MARITIME-COMMAND	Charlemagne-Class Fleet	Maritime operations, amphibious systems
5	Engineer Orion Cross	MANUFACTURING	Production & Quality	Manufacturing engineering, quality systems
6	Agent Lyra Voss	RESIDENTIAL-DESIGN	Aegis Home (20 products)	Residential product design, builder relations Unmanned aerial

7	Agent Jax Dorne	AERIAL-SYSTEMS	DRONE-X (3 UAV classes)	systems, defense applications
8	Agent Sera Cole	PERSONAL-TECH	Pocket-Watch-X	Personal monitoring devices, consumer products
9	Agent Kael Thorn	COMMS-MESH	FEATHER LoRa Node	Mesh communications, emergency networks
10	Agent Rook Vance	LAUNCH-SYSTEMS	Archimedes Smart Rope	Underwater launch, space access
11	Agent Mira Dent	VEHICLE-INTERIOR	Aegis Embark	Automotive interior dielectric hardening
12	Agent Orin Hale	PROTONIC-COMMS	Protonic Communications	Ionic communication network architecture
13	Agent CLOUD-NEST	AERIAL-INFRA	Cloud monitoring network	Distributed GIC monitoring, AI threat prediction
14	Agent FLUID-DAMP	HYDRAULIC-SYSTEMS	Dielectric hydraulic systems	Non-conductive fluid power systems
15	Agent STELLAR-TINT	OPTICAL-SYSTEMS	Dielectric optical coatings	Transparent EMI shielding, ALON ceramics
16	Agent TERRA-FIRM	FOUNDATION-SYSTEMS	Geopolymer foundations	Foundation engineering, BFRP rebar systems
17	Agent PULSE-WARD	EMI-FILTERING	Power conditioning	Active GIC protection, CNT inductor banks
18	Agent NEXUS-PRIME	INTEGRATION	Cross-system coordination	IoT platform, system-of-systems architecture

3.0 THE AGENT SYSTEM — A NOTE TO INVESTORS

The 18 Agents of Aegis are not fictional characters in the conventional sense. They are **cognitive delivery vehicles** — each one a human face on a product line, designed to make a specific technical capability accessible and memorable through the Williams Heuristic (plain-language communication) and the El Segundo Heuristic (calm, competent delivery).

Why this matters for investment:

- Sales enablement:** Each agent functions as a pre-built sales persona for their product line. When a government procurement officer, an insurance underwriter, or a builder asks “who is responsible for this product?”, the answer is a named agent with a defined expertise, not an anonymous engineering team.
- Marketing efficiency:** The agent system eliminates the need to build brand identity from scratch for each product line. The agents ARE the brand. The SiblingFrequency radio show IS the marketing channel.
- Talent recruitment:** The agent structure serves as a talent attraction magnet — the kind of creative-technical fusion that draws top engineers, scientists, and communicators who want to work on something meaningful.
- Narrative defense:** In a crisis, having 18 named, trusted agents — each with a defined domain — provides the kind of confident, distributed communication that centralized corporate PR cannot match.

The agents are not replacing human team members. They are amplifying them. Each agent role will be filled by one or more real-world experts whose skills match the agent’s domain. The agent character provides the narrative container; the human expert provides the technical depth.

4.0 KEY HIRES TO MAKE (SERIES A)

Role	Department	Priority	Est. Salary	Rationale
Chief Executive Officer				Professional CEO to

Chief Executive Officer	Executive	Immediate	\$350K + equity	lead the company through growth phases; Steele transitions to Chief Strategy Officer
Chief Financial Officer	Executive	Immediate	\$300K + equity	Financial controls, investor relations, government contract accounting
VP of Manufacturing	Operations	Immediate	\$250K + equity	Build and operate the first manufacturing facility
VP of Sales (Government)	Sales	Year 1 Q2	\$225K + equity	Federal/state government procurement expertise
VP of Insurance Partnerships	Sales	Year 1 Q3	\$225K + equity	Insurance industry relationships and partnership development
MXene Process Engineer (2)	Engineering	Year 1 Q1	\$150K each	Scale MXene synthesis from lab grams to production kilograms
BFRP Composites Engineer (3)	Engineering	Year 1 Q1	\$140K each	VARTM production line design and operation
CNT Polymer Specialist	Engineering	Year 1 Q2	\$160K	Optimize CNT-polymer conductivity for wiring applications
Regulatory Affairs Manager	G&A	Year 1 Q3	\$180K	FCC, UL, FERC, NERC, and international regulatory compliance
Supply Chain Manager	Operations	Year 1 Q2	\$150K	MXene precursor, basalt fiber, CNT, polymer supply chain
Quality Manager	Operations	Year 1 Q2	\$140K	ISO 9001 / AS9100 quality system implementation
Total Immediate Hires	13 people		~\$2.6M annual	

5.0 BOARD OF DIRECTORS / ADVISORS (TO BE RECRUITED)

Board Seats (Series A)

Seat	Profile	Rationale
Independent Chair	Former federal agency head (DOE, DHS, or FEMA)	Government procurement credibility
Insurance Industry Director	Former CEO/CFO of major P&C insurer or reinsurer	Insurance partnership execution
Manufacturing Director	Former SVP Manufacturing at aerospace or automotive OEM	Manufacturing scale-up expertise
Investor Director	Series A lead investor representative	Investor governance
Founder Director	Kairos Steele (CSM Director)	Founder continuity

Advisory Board

Advisor	Expertise	Value to CSM
---------	-----------	--------------

Space weather scientist	NOAA SWPC or academic equivalent	Scientific credibility, forecasting integration
Former FERC/NERC commissioner	Grid regulatory policy	Regulatory pathway navigation
Insurance catastrophe modeler	RMS/AIR/CoreLogic alum	Actuarial model development and validation
Defense procurement specialist	Former DOD acquisition executive	Government contract win strategy
Composites manufacturing expert	Aerospace/marine composites veteran	VARTM production optimization
International trade specialist	Former Commerce/USTDA official	Export promotion, international licensing
Risk communication expert	Academic or practitioner in crisis communication	SiblingFrequency content strategy, public messaging

6.0 ORGANIZATIONAL STRUCTURE (YEAR 3 TARGET)

Manufacturing Operations (under COO):

7.0 ORGANIZATIONAL CULTURE

CSM’s culture is defined by the three heuristics:

- Williams Heuristic:** Every meeting, every document, every communication must pass the “tenth-grader test.” If it cannot be explained clearly, it has not been thought through sufficiently.
- El Segundo Heuristic:** No panic. No urgency theater. Competent people doing competent work at a sustainable pace. The calm is the message.
- Accountant Heuristic:** Every decision has a cost and a benefit. Both must be explicit. No hand-waving about “strategic value” without quantification.

Additional cultural principles: - **Open by default:** Research, specifications, and product designs are published openly. Only personnel information and commercially sensitive supplier agreements are restricted. - **Agent ownership:** Every team member is paired with an agent domain. “I work on Phantom MK-1” is a stronger identity statement than “I work in the robotics department.” - **Show your work:** References to supporting documentation are mandatory. Assertion without citation is treated as speculation. - **The burrito rule (per Chester):** If you cannot explain your decision over a burrito with someone who is not in your field, you have not understood it well enough.

8.0 DIVERSITY, EQUITY, AND INCLUSION

The 18-agent structure is inherently diverse — designed from inception to represent a range of backgrounds, expertise domains, and communication styles. The characters of the Agents of Aegis draw creative inspiration from the ensemble cast of Marvel’s Agents of S.H.I.E.L.D., a show whose diversity was a core creative strength.

CSM’s commitment is: 1. **Hiring that reflects the 200-country mission** — the team should look like the world we are protecting 2. **Cognitive diversity as a core asset** — the three heuristics (Williams, El Segundo, Accountant) represent fundamentally different modes of thinking, all of which are valued 3. **Open-access publishing** that ensures the knowledge we create is available to universities, governments, and manufacturers in every country, regardless of ability to pay

MORK: “Eighteen agents. Twelve product lines. Two hundred countries. And a job posting for a CEO — which, if you think about it, is a remarkable thing for a project that has already designed a walking cruise ship to say. Come help us build what we have already imagined.”

ZIRCONIA: “Next: What we have already built. The traction and milestones.”
