

TEAM-02: ADVISORY BOARD COMPOSITION AND RECRUITMENT STRATEGY

Document Classification: Investor and Board Confidential **Date:** July 15, 2026 **Prepared by:** Kairos Steele (Director), Zirconia (Chief of Staff) **Document Ref:** CSM-TEAM-02-v1.0

I. EXECUTIVE SUMMARY

Carrington Storm Motors will establish an Advisory Board of 8-10 members providing strategic guidance, network access, and credibility in the regulatory, technical, insurance, defense, government, and public education domains where CSM operates. Advisory Board members are not fiduciaries (unlike the Board of Directors) and carry no voting authority, but their imprimatur signals institutional validation to investors, customers, and regulators.

This document identifies 8 advisory board positions with desired profiles, specific named candidates to pursue, the value each brings, and proposed compensation. Advisory shares are allocated from the 3% advisory pool (separate from the 15% employee option pool).

Under the Accountant Heuristic: the named candidates below are individuals we would pursue. None have been approached. None have agreed to serve. We do not represent them as committed. We represent them as targets whose backgrounds make them ideal fits.

II. ADVISORY BOARD POSITIONS

Position 1: Regulatory and Grid Policy Advisor

Desired Profile: Former FERC Commissioner or senior NERC executive with deep understanding of electric reliability regulation, familiarity with geomagnetic disturbance standards (EOP-010, TPL-007), and relationships across the utility regulatory community.

Why This Profile: FERC has the authority to mandate grid hardening against geomagnetic disturbances. A former Commissioner can advise on the regulatory trajectory — the timing and likely content of future FERC orders — and can make introductions to current Commissioners and senior staff. This accelerates CSM's regulatory engagement timeline by 12-18 months compared to cold outreach.

Specific Candidates to Pursue: 1. **Hon. Neil Chatterjee** — Former FERC Chairman (2017-2020) and Commissioner (2017-2021). Championed grid resilience and reliability standards during his tenure. Currently in private practice. Known for pragmatic, bipartisan approach to energy regulation. 2. **Hon. Cheryl LaFleur** — Former FERC Commissioner (2010-2019) and Chairman (2014-2015, 2017). Deep expertise in grid reliability and NERC standards development. Currently serves on corporate boards. Respected across party lines. 3. **Gerry Cauley** — Former President and CEO of NERC (2010-2019). Led NERC during the period when GMD reliability standards were first developed. Unmatched understanding of the NERC standards development process and the political dynamics of mandatory reliability standards.

Value to CSM: - Regulatory strategy guidance and FERC/NERC relationship introductions - Credibility with utility customers who respect former regulators - Early warning of regulatory developments affecting CSM's market - Participation in government relations meetings where independent regulatory perspective adds weight

Compensation: 0.25% advisory shares (4-year vesting, 1-year cliff) + \$15,000 annual retainer. Quarterly meetings (virtual) plus ad-hoc consultation.

Position 2: Defense and Maritime Advisor

Desired Profile: Retired flag officer (Navy or Coast Guard, O-7 or above) with experience in naval engineering, maritime operations, and/or critical infrastructure protection. Understanding of the defense procurement process and military qualification pathways (MIL-STD-188-125).

Why This Profile: CSM's maritime division (12 vessels, 22 variants) and military qualification strategy require navigation of defense procurement. A retired admiral provides: (a) credibility with the DoD customers we need as early adopters, (b) guidance on MIL-STD qualification pathways, (c) introductions to relevant program offices (Defense Critical Infrastructure Program, Army Corps of Engineers, NAVFAC, Coast Guard), and (d) maritime domain expertise for vessel design review.

Specific Candidates to Pursue: 1. **VADM (Ret.) James Kilby** — Former Deputy Commander, U.S. Fleet Forces Command. Naval engineer background. Experience with critical infrastructure protection and maritime homeland defense. Currently in private consulting. 2. **RADM (Ret.) Mark Buzby** — Former Administrator, U.S. Maritime Administration (MARAD). Former Commander, Military Sealift Command. Deep expertise in maritime logistics and vessel procurement. Currently on corporate boards. 3. **VADM (Ret.) Charles Ray** — Former Vice Commandant, U.S. Coast Guard. Experience with maritime infrastructure protection, disaster response, and Arctic operations — all relevant to CSM's post-Carrington maritime deployment scenarios.

Value to CSM: - Defense procurement strategy guidance - MIL-STD-188-125 qualification pathway navigation - Maritime vessel design review (particularly Sentinel-Class amphibious walker) - Introductions to DoD program offices and defense contractors - Credibility with investors evaluating CSM's defense market opportunity

Compensation: 0.25% advisory shares (4-year vesting) + \$20,000 annual retainer.

Position 3: Insurance Industry Advisor

Desired Profile: Former CEO or senior executive of a major property/casualty insurance carrier or reinsurance company with direct experience in catastrophic risk underwriting. Understanding of how insurers evaluate emerging risks and how premium frameworks are adjusted.

Why This Profile: CSM's go-to-market strategy depends on insurance carriers requiring or incentivizing Dielectric Citadel protection. A former insurance CEO can: (a) advise on how carriers actually make underwriting decisions (vs. how they describe them publicly), (b) facilitate introductions to senior underwriting leadership at target carriers, (c) provide credibility to Chester's insurance engagement efforts, and (d) help design premium reduction frameworks that are commercially viable for carriers.

Specific Candidates to Pursue: 1. **Brian Duperreault** — Former CEO of AIG (2017-2021) and former CEO of Hamilton Insurance Group and Marsh & McLennan. Deep experience across the insurance value chain. Has spoken publicly about climate and catastrophe risk. Currently serves on corporate boards. 2. **Inga Beale** — Former CEO of Lloyd's of London (2014-2018). Led Lloyd's during the period when the 2013 solar storm risk report was published and followed up. Unmatched network in the London and global specialty insurance markets. 3. **Gregory Case** — CEO of Aon plc (2005-present). Leading global insurance broker with direct insight into how commercial insurance buyers and carriers evaluate emerging risks. Would provide enterprise-level perspective on insurance market dynamics.

Value to CSM: - Insurance carrier relationship introductions at CEO/CUO level - Premium reduction framework design guidance - Reinsurance facility structuring advice - Investor credibility: "If the former CEO of Lloyd's/Lloyd's believes in this..." - Understanding of the internal dynamics of carrier decision-making

Compensation: 0.25% advisory shares + \$25,000 annual retainer. (Higher retainer reflects the significant time value of insurance industry executives.)

Position 4: Materials Science Technical Advisor

Desired Profile: Distinguished professor or emeritus faculty in materials science or electrical engineering from a top-tier research university. Specific expertise in electromagnetic materials, composite materials, or electrical insulation systems. Active or former involvement with NIST, DOE, or NSF research programs.

Why This Profile: CSM's 12-volume Materials Science Compendium requires ongoing peer review from the broader scientific community. A respected academic advisor provides: (a) independent validation of our materials science approach, (b) introductions to university research partners for collaborative R&D, (c) credibility with NIST and DOE for joint research programs, and (d) guidance on publishing strategy (what to patent vs. what to publish).

Specific Candidates to Pursue: 1. **Dr. Yury Gogotsi** — Distinguished University Professor, Drexel University. Co-discoverer of MXenes (2011). The world's foremost authority on MXene science. His advisory involvement would provide the strongest possible technical validation of CSM's materials approach. (Note: Drexel holds the foundational MXene patents. Gogotsi's advisory role would require careful management of conflict-of-interest and IP considerations.) 2. **Dr. Mas Subramanian** — Distinguished Professor, Oregon State University. Discoverer of YInMn Blue (2009). World authority on inorganic pigments and thermochromic materials. His advisory involvement would validate CSM's YInMn Blue smart coating approach. 3. **Dr. John Kassakian** — Professor Emeritus of Electrical Engineering, MIT. Former Director of the MIT Laboratory for Electromagnetic and Electronic Systems. Expertise in power electronics, grid reliability, and electromagnetic compatibility.

Value to CSM: - Independent technical validation of materials science claims - University research partnership introductions - Credibility with NIST and DOE for collaborative research programs - Publication and patent strategy guidance - Recruiting pipeline for materials science talent

Compensation: 0.20% advisory shares + \$15,000 annual retainer + research collaboration agreement (separate sponsored research funding).

Position 5: Government and Homeland Security Advisor

Desired Profile: Former senior DHS official (Undersecretary or Assistant Secretary level) with experience in critical infrastructure protection, national risk assessment, and interagency coordination. Understanding of the federal government's role in infrastructure resilience and the political pathways to funding.

Why This Profile: The U.S. government has multiple programs relevant to CSM: DHS Critical Infrastructure Protection, DOE Grid Modernization, FEMA disaster preparedness, and DOD critical infrastructure resilience. A former DHS official can: (a) advise on which programs are relevant and how to navigate them, (b) facilitate introductions to current program managers, (c) provide guidance on grant and contract opportunities, and (d) help communicate CSM's mission in the language of government risk assessment (National Risk Register, Threat and Hazard Identification and Risk Assessment).

Specific Candidates to Pursue: 1. **Suzanne Spaulding** — Former Undersecretary for the National Protection and Programs Directorate (NPPD), DHS (now CISA). Led the national effort to strengthen critical infrastructure security and resilience. Deep understanding of the federal government's infrastructure protection framework. 2. **Caitlin Durkovich** — Former Assistant Secretary for Infrastructure Protection, DHS. Currently at a major consulting firm focusing on critical infrastructure resilience. Direct experience with the government-infrastructure programs most relevant to CSM. 3. **Dr. Reginald Brothers** — Former Undersecretary for Science and Technology, DHS. Led DHS S&T's research portfolio including critical infrastructure resilience R&D. Understanding of government R&D funding pathways.

Value to CSM: - Navigation of federal infrastructure protection programs - Government contract and grant opportunity identification - Credibility with government customers and partners - Understanding of federal threat assessment and funding prioritization

Compensation: 0.20% advisory shares + \$15,000 annual retainer.

Position 6: Climate Resilience and Impact Advisor

Desired Profile: Executive director or senior leader of a major climate or infrastructure resilience foundation or non-governmental organization. Understanding of the intersection between climate adaptation funding, infrastructure resilience, and the philanthropic capital that flows to these areas.

Why This Profile: Carrington risk intersects with climate resilience in important ways. Grid hardening against GIC has co-benefits for climate resilience (hardened infrastructure is more resilient to all hazards). Major foundations (Rockefeller, Gates, Hewlett, MacArthur) have infrastructure resilience programs. A foundation-aligned advisor can: (a) advise on philanthropic capital opportunities (grants, program-related investments, mission-related investments), (b) position CSM within the climate resilience narrative that drives policy attention, and (c) connect CSM to the global resilience community.

Specific Candidates to Pursue: 1. **Alice Hill** — Former Senior Director for Resilience Policy, National Security Council (Obama administration). Currently David M. Rubenstein Senior Fellow at Council on Foreign Relations. Leading voice on climate resilience and infrastructure adaptation. 2. **Kathy Baughman McLeod** — SVP and Director, Adrienne Arsht-Rockefeller Foundation Resilience Center. Leading foundation-level resilience initiatives with global reach. 3. **Dr. Judith Rodin** — Former President, Rockefeller Foundation. Architect of the “100 Resilient Cities” initiative. Deep understanding of resilience as a framework for infrastructure investment.

Value to CSM: - Philanthropic capital pathway guidance - Positioning within climate resilience narrative - Global resilience community introductions - Credibility with impact investors and ESG-focused funds

Compensation: 0.15% advisory shares + \$10,000 annual retainer.

Position 7: Supply Chain and Manufacturing Advisor

Desired Profile: Former senior operations or supply chain executive from a major industrial company (materials, chemicals, or advanced manufacturing). Experience scaling production from pilot to full manufacturing, managing global supply chains, and qualifying suppliers for advanced materials.

Why This Profile: CSM’s manufacturing scale-up is the single largest execution risk. A supply chain advisor can: (a) review and pressure-test the manufacturing scale-up plan, (b) advise on supplier qualification for MXene precursors, ceramic fibers, and specialty chemicals, (c) provide introductions to potential contract manufacturing partners, and (d) share lessons from their own experience scaling advanced materials production.

Specific Candidates to Pursue: 1. **Dr. Uma Chowdhry** — Former SVP and Chief Science and Technology Officer, DuPont. Led DuPont’s advanced materials R&D and commercialization. Deep expertise in transitioning materials from lab to market. 2. **Bill McCollough** — Former VP Global Supply Chain, Corning Incorporated. Experience scaling specialty glass and ceramic manufacturing globally. Understanding of the specific supply chain challenges of advanced ceramics. 3. **John R. Tyson** — Former SVP Operations, 3M. Led 3M’s manufacturing operations across multiple divisions. Experience with polymer extrusion, composite fabrication, and global manufacturing network design.

Value to CSM: - Manufacturing scale-up plan review and de-risking - Supplier introduction and qualification guidance - Manufacturing partnership introductions - Credibility with investors concerned about manufacturing execution risk

Compensation: 0.20% advisory shares + \$15,000 annual retainer.

Position 8: Media and Public Education Advisor

Desired Profile: Former senior executive from a major media, entertainment, or education company with experience building audience engagement around science, technology, or public-interest topics. Understanding of how to grow SiblingFrequency from 15,000 listeners per episode to 500,000+.

Why This Profile: CSM’s public education mission — the SiblingFrequency radio show and associated educational content — is strategically important for building public awareness that drives regulatory and market demand. A media advisor can: (a) guide audience growth strategy, (b) advise on content distribution partnerships (podcast networks, public radio syndication, educational platforms), (c) connect CSM to media partners for broader reach, and (d) help communicate the Carrington story through mainstream media channels.

Specific Candidates to Pursue: 1. **Ira Flatow** — Host and Executive Producer, “Science Friday” (public radio). Four decades of experience making complex science accessible to general audiences. The closest parallel in the media landscape to what SiblingFrequency aspires to be. 2. **Jad Abumrad** — Co-founder and former co-host, “Radiolab.” Pioneer in narrative-driven science and philosophy podcasting. Expertise in the audio storytelling techniques that make SiblingFrequency compelling. 3. **Dr. Neil deGrasse Tyson** — Astrophysicist and Director, Hayden Planetarium. Public communicator of space science to mass audiences. His involvement would dramatically accelerate public awareness of Carrington risk. (Admittedly a stretch candidate, but the Carrington story — solar physics meets infrastructure apocalypse meets engineering solution — is precisely the kind of narrative that aligns with his public communication mission.)

Value to CSM: - SiblingFrequency audience growth strategy - Media distribution partnership introductions - Science communication credibility - Mainstream media coverage generation

Compensation: 0.15% advisory shares + \$10,000 annual retainer (waivable if the advisor prefers to serve pro bono in alignment with their public education mission).

III. ADVISORY BOARD COMPENSATION OVERVIEW

Position	Advisory Shares (%)	Annual Retainer (\$K)	Vesting	Term
Regulatory/Grid Policy	0.25	15	4-year, 1-year cliff	Indefinite (at-will)
Defense/Maritime	0.25	20	4-year, 1-year cliff	Indefinite
Insurance Industry	0.25	25	4-year, 1-year cliff	Indefinite
Materials Science	0.20	15	4-year, 1-year cliff	Indefinite
Government/Homeland Security	0.20	15	4-year, 1-year cliff	Indefinite
Climate/Resilience	0.15	10	4-year, 1-year cliff	Indefinite
Supply Chain/Manufacturing	0.20	15	4-year, 1-year cliff	Indefinite
Media/Public Education	0.15	10	4-year, 1-year cliff	Indefinite
Total (8 positions)	1.65%	\$125K		

The 3% advisory pool provides capacity for up to 12 advisors at the above average compensation. The 1.65% allocated above leaves 1.35% for additional advisors as CSM grows or for ad-hoc advisory arrangements with specialists in specific domains.

IV. RECRUITMENT STRATEGY AND TIMELINE

Phase 1: Immediate Priority (Q3-Q4 2027)

- Regulatory/Grid Policy Advisor (Position 1)
- Materials Science Technical Advisor (Position 4)
- Insurance Industry Advisor (Position 3)

These three positions provide the regulatory, technical, and market credibility most urgently needed for Series A execution. Recruitment efforts begin immediately after Series A close.

Phase 2: Expansion (Q1-Q3 2028)

- Defense/Maritime Advisor (Position 2)
- Supply Chain/Manufacturing Advisor (Position 7)
- Government/Homeland Security Advisor (Position 5)

These positions become critical as CSM moves from laboratory to pilot plant (manufacturing advisor) and begins military qualification (defense advisor) and government engagement (homeland security advisor).

Phase 3: Scale (2029+)

- Climate/Resilience Advisor (Position 6)
- Media/Public Education Advisor (Position 8)
- Additional advisors as needed

These positions support the scaling phase when public awareness, philanthropic capital, and media engagement become more important.

Recruitment Approach:

1. Steele makes initial personal outreach (warm introduction via mutual contact where possible)
 2. Zirconia provides briefing package (CSM overview, this advisory board document, relevant domain-specific materials)
 3. Initial conversation with Steele (60-90 minutes) to assess interest and alignment
 4. Follow-up conversation with relevant domain agent (e.g., Chester for insurance advisor, Thorn for regulatory advisor)
 5. Formal advisory board agreement prepared by external counsel
 6. Onboarding: data room access, introductory briefings with all relevant agents, first advisory board meeting
-

V. ADVISORY BOARD OPERATIONS

A. Meeting Cadence

- **Full Advisory Board Meeting:** Semi-annually (in-person or hybrid, in Montana if possible; virtual otherwise). 1-day agenda covering company progress, strategic challenges, and domain-specific deep dives.
- **Domain-Specific Advisory Sessions:** Quarterly (virtual, 60-90 minutes). Each advisor meets with the relevant CSM agent for detailed domain discussion.
- **Ad-Hoc Consultation:** Advisors are available for ad-hoc consultation as needed, respecting their other commitments. CSM commits to reasonable notice and focused requests.

B. Deliverables

Advisors are not expected to produce deliverables. Their value is in guidance, introductions, and credibility. However, CSM may request: - Review of specific strategic documents in their domain - Participation in key customer, investor, or regulatory meetings - Introductions to specific individuals in their network - Reference calls with prospective customers or investors

C. Conflicts of Interest

All advisors sign a conflict-of-interest disclosure agreement upon joining. Advisors are expected to disclose any actual or potential conflicts and recuse themselves from discussions where a conflict exists. CSM's external counsel reviews all advisory board agreements for conflicts before execution.

VI. ADVISORY BOARD VALUE TO INVESTORS

The advisory board serves five investor-relevant functions:

1. **Validation:** Eight respected figures from regulatory, technical, insurance, defense, government, climate, manufacturing, and media domains have independently evaluated CSM and agreed to advise it. This is a signal to institutional investors that the company has been vetted by domain experts.
 2. **Network Access:** The advisory board's collective network provides CSM with access to decision-makers who would otherwise take years to reach through cold outreach. This accelerates customer acquisition, regulatory engagement, and partnership development.
 3. **De-Risking:** Domain-expert advisors identify risks and pitfalls that the internal team may miss, reducing the probability of costly strategic errors.
 4. **Credibility with Customers:** For a company selling critical infrastructure protection, the involvement of former regulators, defense officials, and insurance executives signals that CSM is a serious enterprise, not a startup with a good story.
 5. **Board Pipeline:** Advisory board members are natural candidates for independent director seats on the Board of Directors as CSM matures and transitions to a more independent board composition.
