

INS-04: Carrington Storm Motors — Insurer Onboarding Pipeline

Document ID: CSM/INS/04 **Version:** 1.0 — Investor-Grade **Classification:** Confidential — For Qualified Investors and Insurance Partners **Heuristic Foundation:** El Segundo (phased execution), Accountant (pipeline metrics), Williams (partner transparency) **Agents Consulted:** Insurance domain agent, Chester, El Segundo **Date:** July 2026

1.0 EXECUTIVE SUMMARY

Carrington Storm Motors’ insurer onboarding pipeline is the operational plan for converting 41 prepared insurer dossiers into active, revenue-generating insurance partnerships. The pipeline is structured in three tiers, with a phased onboarding process designed to move insurers from initial awareness through actuarial validation, pilot program, product launch, and full commercial scale.

The target: **10 active insurance partnerships by Year 2, scaling to 50+ by Year 5, and 200+ by Year 10**, covering every major insurance market globally.

This document outlines the tier structure, onboarding process, timeline, resource requirements, and success metrics for the insurer pipeline.

As El Segundo frames it: “The insurers are identified, the dossiers are prepared, the actuarial models are built. Now we execute. Each insurer onboarded is a distribution channel for CSM products that requires no CSM sales force — the insurer’s agents sell the product for us.”

2.0 TIER STRUCTURE

2.1 Tier 1 — Global Leaders (10 Insurers)

Insurer	HQ	Lines	Partnership Focus	Status
Swiss Re	Zurich	Reinsurance	Reinsurance treaties; ILS; parametric triggers	Dossier prepared — engagement pending
Munich Re	Munich	Reinsurance	Reinsurance; capital relief analysis	Dossier prepared
AXA	Paris	Primary + Reinsurance	European property; commercial lines	Dossier prepared
Chubb	Zurich/New York	Primary (global P&C)	Commercial property; high-net-worth homeowners	Dossier prepared
Zurich Insurance	Zurich	Primary (global)	Commercial property; energy	Dossier prepared
Allianz	Munich	Primary + Reinsurance (AGCS)	European property; industrial lines	Dossier prepared
AIG	New York	Primary (global)	Commercial property; utilities	Dossier prepared
Berkshire Hathaway (Gen Re / BH Primary)	Omaha	Reinsurance + Primary	Large-capacity reinsurance; utility	Dossier prepared
Lloyd’s Syndicates (multiple)	London	Specialty	Marine, aviation, energy, parametric	Dossiers prepared for key syndicates
SCOR	Paris	Reinsurance	European reinsurance; ILS	Dossier prepared

2.2 Tier 2 — Regional Leaders (15 Insurers)

National and regional carriers in key markets: Travelers, Liberty Mutual, Hartford, Nationwide, Farmers, USAA (US); Aviva, RSA, Direct Line (UK); Intact Financial, Desjardins (Canada); QBE, IAG, Suncorp (Australia); Tokio Marine, Sompo (Japan); Samsung Fire & Marine (Korea); Ping An, PICC (China — approaching carefully given CFIUS/national security considerations).

2.3 Tier 3 — Specialty and Niche (16 Insurers)

Marine insurers (Gard, Skuld, Steamship Mutual, UK P&I Club), energy insurers (AEGIS — coincidental name, no relation; Energy Insurance Mutual), infrastructure insurers, parametric specialists, and insurtech companies with innovation appetite.

3.0 ONBOARDING PROCESS — SIX STAGES

3.1 Stage 1: Initial Briefing (Months 1-2)

Activity	Description
CSM introduction	CEO or Chief Insurance Officer presents CSM overview to insurer's Chief Underwriting Officer / CUO
Threat briefing	Presentation of GMD threat data, NAS/Lloyd's reports, CSM solar physics overview
Product overview	Demonstration of relevant CSM products (Aegis, Charlemagne, fleet products)
Preliminary loss model	High-level presentation of GMD loss model for insurer's portfolio
Partnership vision	Shared savings model; premium reduction concept; parametric trigger concept
NDA execution	Mutual non-disclosure agreement for detailed data sharing

Goal: Insurer expresses interest in proceeding to detailed actuarial review.

3.2 Stage 2: Actuarial Model Sharing (Months 3-6)

Activity	Description
Data room access	Insurer's actuarial team granted access to CSM data room (DD-01 technical data, INS-02 actuarial framework)
Portfolio analysis	CSM team works with insurer to model GMD exposure in insurer's specific book of business
Loss reduction modeling	Insurer's actuary validates CSM's loss reduction estimates against the insurer's portfolio
Premium reduction calculation	Joint calculation of premium reduction that can be offered for CSM-hardened risks
Capital relief analysis	Analysis of capital relief benefits for insurer (or insurer's reinsurers)
Independent actuary engagement	Optional: insurer engages independent actuary for additional validation

Goal: Insurer's actuary confirms that CSM hardening provides actuarially-justified loss reduction.

3.3 Stage 3: Pilot Program Design (Months 5-8)

Activity	Description
Pilot scope	Define pilot program: number of policies, geographic scope, product lines
Product design	Joint design of insurance product or rider incorporating CSM hardening requirement
Pricing	Finalize premium reduction amount based on actuarial analysis
Regulatory strategy	Identify target states for initial regulatory filing
Customer selection	Identify pilot customers (insurer's existing policyholders in target areas)
CSM product delivery	CSM manufactures and delivers pilot units
Installation and certification	CSM or certified installer deploys products; CSM certifies installation
Monitoring setup	CSM monitoring platform configured for pilot policyholders

Goal: Pilot program ready to launch; regulatory filing submitted.

3.4 Stage 4: Regulatory Filing and Pilot Launch (Months 8-14)

Activity	Description
Rate filing	Insurer files rate adjustment with state insurance departments (3-6 month review cycle)
Regulatory engagement	Joint CSM-insurer meetings with insurance departments to explain actuarial basis
Pilot launch	Pilot customers enrolled; CSM products installed; monitoring active
Data collection	Claims, GIC monitoring, product performance data collected throughout pilot
Interim review	6-month and 12-month reviews of pilot data

Goal: Regulatory approval received in pilot states; pilot data supports broader launch.

3.5 Stage 5: Premium Product Development (Months 12-18)

Activity	Description
Full product design	Based on pilot results, design commercial-scale insurance product
Multi-state filing	Expand regulatory filings to all target states
Marketing materials	Develop customer-facing materials explaining EMP-hardened policy benefits
Agent/broker training	Train insurer's distribution force on CSM-hardened policies
Claims protocol	Establish claims handling protocol for GMD events (parametric trigger + traditional claims)
CSM scale-up	CSM scales manufacturing to meet expected demand from insurer's policyholders

Goal: Product ready for full commercial launch in all target states.

3.6 Stage 6: Market Launch and Scale (Months 18+)

Activity	Description
Full launch	Product available to all eligible policyholders in approved states
Continuous monitoring	CSM provides ongoing product performance data to insurer
Annual model recalibration	Joint actuarial review and model update based on actual data
Expansion	Additional product lines; additional states; additional countries
Reinsurance integration	Insurer's reinsurance treaties updated to reflect CSM risk reduction

Goal: Self-sustaining commercial partnership generating recurring revenue for CSM and loss reduction for insurer.

4.0 TIMELINE AND TARGETS

4.1 Insurer Pipeline Ramp

Year	Tier 1 Launches	Tier 2 Launches	Tier 3 Launches	Cumulative Live Partners
Year 1	0	0	0	0 (engagement phase)
Year 2	2 (pilot)	0	0	2
Year 3	5 (3 new)	2 (pilot)	1 (pilot)	8
Year 4	8 (3 new)	5 (3 new)	3 (2 new)	16
Year 5	10 (2 new)	10 (5 new)	5 (2 new)	25+
Year 7	10	20	15	45+
Year 10	10	40	30	80+

Additional insurers beyond the initial 41: As the CSM model proves successful, new insurers will approach CSM (inbound interest) rather than CSM having to sell to them (outbound business development). This transition from “push” to “pull” is the key scaling inflection point.

5.0 RESOURCE REQUIREMENTS

5.1 Insurance Partnership Team

Role	Headcount (Year 1)	Headcount (Year 3)	Headcount (Year 5)
Chief Insurance Officer (CIO)	1	1	1
Actuarial Analysts	1-2	3-5	6-10
Business Development (insurer relationships)	1-2	3-5	8-12
Regulatory Affairs (insurance)	0-1 (shared with legal)	1-2	3-5
Data Analysts (insurance monitoring platform)	1	2-4	5-10
Insurance Product Managers	0	1-2	3-5
TOTAL	4-7	11-19	26-43

5.2 Budget

Category	Year 1	Year 3	Year 5
Personnel	\$1-2M	\$2.5-5M	\$6-12M
Actuarial consultants	\$250-500K	\$200-500K	\$100-250K

Category	Year 1	Year 3	Year 5
Travel & entertainment (partner meetings)	\$100-250K	\$250-500K	\$500K-1M
Legal (regulatory filings)	\$100-250K	\$300-750K	\$500K-1.5M
Data room / technology	\$50-100K	\$100-250K	\$250-500K
TOTAL	\$1.5-3.1M	\$3.35-7M	\$7.35-15.25M

6.0 SUCCESS METRICS

6.1 Pipeline Metrics

Metric	Year 1	Year 3	Year 5
Insurers engaged (Stage 1+)	20+	40+	80+
Insurers in actuarial review (Stage 2+)	10	25	50+
Insurers in pilot (Stage 3+)	2-3	10	30+
Live partnerships (Stage 5-6)	0	5	25+
Policies with CSM hardening requirement	0	5,000+	100,000+
CSM insurance revenue	\$0	\$500K-1.5M	\$10M-30M

6.2 Quality Metrics

Metric	Target
Actuarial model acceptance rate (insurers who proceed from Stage 2 to Stage 3)	>70%
Pilot-to-launch conversion rate	>80%
Insurer satisfaction (annual survey)	>4.0/5.0
Regulatory approval rate (state filings)	>90% (eventually)
Loss ratio on CSM-hardened policies (actual claims / premium)	<50% (industry average is 60-70%; CSM-hardened portfolios should outperform)

7.0 AGENT VOICES

Insurance Domain Agent: “The six-stage process sounds bureaucratic, but it’s actually compressed for the insurance industry. Most insurer partnerships take 2-3 years from first meeting to product launch. We’re targeting 12-18 months. That’s aggressive but achievable, because the actuarial math is clean and the threat is real. The bottleneck will be regulatory filings — state insurance departments are famously slow. Parallel filing with multiple states helps, but some states will take their full review period regardless.”

El Segundo (Execution): “This pipeline is the operational backbone of the insurance strategy. Each insurer moving through the stages represents revenue, distribution, and loss reduction. The El Segundo principle applies: urgent enough to push for 12-month onboarding, measured enough to ensure actuarial rigor and regulatory compliance. Cut corners on neither.”

Chester (Pipeline Economics): “The insurer pipeline is a compounding machine. Each insurer onboarded adds distribution without adding sales cost. Each policy sold through that insurer generates hardware revenue AND recurring insurance share revenue. At 200 insurers and 5 million policies, the insurance revenue stream alone is worth \$500M-\$1.5B annually — with gross margins above 70% (no hardware COGS on the insurance share, just monitoring platform costs). The pipeline pays for itself 100x over.”

Document prepared for qualified investors and insurance partners. All timelines are targets subject to regulatory and commercial variables. Actual onboarding timelines will vary by insurer and jurisdiction. This document does not constitute an offer of insurance or a commitment to partnership terms.
